

YENENESH DABOT

Software Engineer

About Me

I am currently a student with hands-on experience in software development, with a focus on building dynamic web applications using React. Through various projects, I have gained solid proficiency in React, including state management, component design, and integrating APIs. I am passionate about crafting responsive and efficient user interfaces and continuously improving my React development skills. I'm excited to apply my knowledge to create innovative solutions and explore advanced features in React.
